Oh no, not another tie!

Father's Day is almost here. Would you like to get your Dad -- or that other special guy -- a totally unique gift that he will love and that will help him protect his most valuable possessions?

Dad always took care of you -- now it's your turn to take care of him. This year, give your dad a GarageHawk!

If your Dad is like most, he has a garage full of toys and other valuables that are often seen as easy targets by burglars. An open garage door is an invitation to crime. GarageHawk lets you know when the garage door is open and allows you to close the door (s) from anywhere in the home.

The GarageHawk system provides a visual garage door status indication via a small plug-in module. Garagehawk communicates over the existing power lines in your home so no home re-wiring or batteries are needed. It can be easily installed by anyone using only a screwdriver. The system does not interfere with regular garage door opener operation, garage door sensors or other garage door safety features.

The Remote Module's Status Indicator button (see button at far right) casts a reassuring green glow when the garage door is closed and glows bright red when the door is open. Simply push the same button to close the garage door.

Your Dad has a lot of things on his mind -- now worrying about leaving the garage door open won't have to be one of them!

Please feel free to share this message with friends who have great dads, too.

GarageHawk Tip of the Week:

Does Dad have more than one garage door? GarageHawk allows you to monitor and close multiple garage doors with a single Remote Module. If you have a GarageHawk Starter Kit and need to monitor *additional* garage doors, simply add additional a Garage Module(s) for each garage door. The Remote Module can provide a common indication if any garage door is open. A press of the "Close Door Button" will close any door that is open. For additional details visit our website:
