

GarageHawk Now Allows You to Monitor/Close Your Garage Door Using Your Mobile Device!

September 22, 2010

Buy GarageHawk Now

Our customers have asked that we expand our garage door monitoring and closing capabilities to their mobile device. We listened and are now happy to announce that we have partnered with several vendors to provide this new functionality along with other home automation capabilities.

GarageHawk was developed using a power line communication technology called INSTEON. INSTEON is the best-selling, most reliable home control and automation technology. The use of the INSTEON standard also makes the GarageHawk system expandable with a broad range of other home automation devices available from numerous sources. For example, GarageHawk already has the ability to control temporary path lighting whenever the garage door is opened by simply adding an inexpensive plug-in module or compatible wall switch. A plug-in chime module could also be added to the system to provide a pleasant audible alert whenever the garage door is opened.

[INSTEON home automation controllers](#) can further expand the automation of your home. These reasonably priced controllers can take the form of either hardware-based devices or merely software running on your existing PC or Mac. They can be configured by the user to automatically control lighting, appliances, thermostats, irrigation, door locks, and now your garage door too (e.g., automatically close the garage door at sunset or after a pre-determined interval). Most home automation controllers now also have applications for iPhone or Android access and control.

We are working closely with the independent manufacturers of the INSTEON home automation controllers listed below. If your favorite automation controller is not listed please [contact us](#) for status.

Product Hardware/Software Name	GarageHawk MobileSupport Compatibility

****Advanced Quonset announces support for GarageHawk with Home Control Assistant (HCA10 Plus) and their Android phone client.**

Have you ever left home and wondered if you remembered to close your garage door? Now you can monitor and close your garage door from anywhere with your Android capable mobile device. Home Control Assistant (HCA) is a reasonably priced Windows based home automation program that runs on any computer that uses the Windows XP, Vista or Win7 operating system. HCA works with most X10 or INSTEON automation interfaces to control lights, appliances, irrigation, HVAC and more. With HCA's Scheduling and Green Mode features you can easily save money, reduce electrical usage, conserve water and improve safety by automating your home.

For more information visit the [Home Control Assistant website](#). HCA offers **a free 30 day time limited trial** of their software which includes their client for Android.
